

Gift of Life Donor Program

Headquartered in Philadelphia, PA, **Gift of Life Donor Program** is the largest organ procurement organization (OPO) in the United States, serving 11.3 million people across the eastern half of Pennsylvania, southern New Jersey and Delaware. The non-profit, federally-designated OPO is part of the national network, UNOS, the United Network for Organ Sharing. Working in partnership with the 126 acute care hospitals and 13 transplant centers in its designated service area, Gift of Life helps give people a second chance at life. Since 1974, Gift of Life has coordinated more than 58,000 organs for transplantation and more than two million life-enhancing tissue transplants.

The need for more donors is one of this country's critical public health issues. Currently, there are more than 100,000 men, women and children awaiting a life-saving transplant in the United States, with an average of 17 people dying each day waiting for an organ. Just one organ donor can save up to eight lives, and one tissue donor can improve the lives of more than 100 others.

Gift of Life's devotion to the transplant community includes a "home away from home" for transplant patients and their families. **Gift of Life Howie's House** provides affordable lodging, meals and supportive services to those who travel to Philadelphia for transplant-related care. Since its founding in July 2011, the House has provided more than 85,430 nights of food, lodging and supportive services. With community support, The House has welcomed 153,351 guests and served more than 306,702 meals.

Gift of Life Donor Program is recognized internationally for its leadership and scholarship in the field of organ and tissue donation. The **Gift of Life Institute**, an affiliate of Gift of Life, is the international leader in organ and tissue donation education, training close more than 13,400 professionals from 33 countries since 2004. In 2022, the Institute conducted training for more than 1,225 participants.

Gift of Life Institute's **Transplant Pregnancy Registry International (TPRI)** studies post-transplant parenthood and the effects of medications on fertility and pregnancy. Since 1991, TPRI has tracked 3,062 parents and 5,326 pregnancies, sharing information with countless transplant recipients and their healthcare teams making family planning decisions.

With ongoing advancements in transplantation, the overall need for organ donation grows, as does the need for more registrants. Currently, in Gift of Life's region, there are more than 5,000 men, women, and children awaiting life-saving transplants. Gift of Life encourages everyone to discuss organ donation with loved ones to make their personal preferences known. For more information on organ donation or to register, go to www.donors1.org. It takes less than a minute.
