

EMPOWERING GROWTH.
SAVING LIVES.

SAVE *the* DATE

The Mid-Atlantic **TRANSPLANT GROWTH COLLABORATION (TGC)** meeting is a focused session designed to provide hospital and health system C-suite leaders, transplant administrators, and surgeons with proven strategies from leading transplant programs to drive program growth and improve patient outcomes.

THE CHALLENGE

TRANSPLANT RATES LAG BEHIND DONATIONS.

Organ donations have risen steadily, but transplant rates haven't kept pace, resulting in:

- Missed opportunities to save lives
- Higher non-use rates of viable organs
- Longer waitlist times for patients

WHY ATTEND?

- Learn how top transplant centers have achieved significant growth;
- Overcome common barriers to program expansion;
- See the impact of growth on patient outcomes, financial performance, and lives saved;
- Set bold goals for your program's future.

60k TRANSPLANTS BY 2026

Achieving this ambitious target set by OPTN depends on your leadership. Be part of the solution to drive meaningful change and maximize organ utilization.

THE OPPORTUNITY

CLOSE THE GAP. GROW YOUR PROGRAM. SAVE MORE LIVES.

Advances in technology now make it possible to successfully transplant more organs, including those previously underutilized. Programs focusing on lung and kidney transplantation are leading the way.
